MISCELLANEOUS INFORMATION

ABBREVIATIONS

4X2	Two Wheel Drive	S.C.	Supercharged
4X4	Four Wheel Drive	SDC	(In tank) Side Discharge
A/C	Air Conditioning	S.F.I.	Sequential Fuel Injection
AFM	Active Fuel Management	SIDI	Spark Ignition Direct Injection
Aft Axle	After Axle	SOHC	Single Overhead Camshaft
A.T.	Automatic Transmission	Spd	Speed
AWD	All Wheel Drive	Sta. Wag.	Station Wagon
C.F.I.	Crossfire Injection	TBD	To Be Determined
CNG	Compressed Natural Gas	T.B.I.	Throttle Body Injection
Cont'd	Continued	T.P.I.	Tune Port Injection
CPI	Central Port Injection	Turbo	Turbocharged
CRI	Common Rail Injection	VTEC	Variable Valve Timing Lift Electronic Control
Cyl.	Cylinder	VVT	Variable Valve Timing
D.F.I.	Digital Fuel Injection		
D.I.	Direct Injection		
DOHC	Dual Overhead Camshaft		
Ecotec	Emissions Control Optimization Technology		
E.F.I.	Electronic Fuel Injection		
E.G.R.	Exhaust Gas Recirculation		
E-Flex	Electric & Flex Fuel Capable Vehicle		
Eng.	Engine		
Exc.	Except		
FFV	Flex Fuel Vehicle		
F.I.	Fuel Injection		
FWD	Front Wheel Drive		
H.O.	Hi-Output Engines		
IDI	Indirect Injection		
Inj.	Injection		
Inst.	Instrument		
L	Liters		
L/	Less		
LIVC	Late Intake Valve Closing		
LPP	(In tank) Low-Pressure Primer Pump		
M.P.I.	Multi Point Fuel Injection		
M.T.	Manual Transmission		
O.E.	Original Equipment		
OHV	Overhead Valve		
Pass	Passenger		
Prop	Propane		
P.S.	Power Steering		
RWD	Rear Wheel Drive		

Definitions

Part Number: Fuel pump or tank unit (Module) and all necessary installation hardware, with instructions
Required Filter: If part number appears in this column, it must be ordered separately

General Motors Module Assembly I.D.

Some of the General Motors module assemblies have a three digit code stamped on an I.D. tag as shown on the above illustration. This I.D. number can be used to determine the correct replacement unit by using the following interchange:

<u>I.D. #</u>	<u>Module #</u>

Accessories

TF0001275

94-614

Walbro GSS pump connector to Mitsubishi style connector. Wire is 16 AWG. Overall length is 7". Used in pump and kit #GCA702.

94-615

Universal wire harness with Walbro GSS pump connector on one end. Wire is 14 AWG. Overall length is 12". Use with 187-113 butt connectors. Use in pump & kit #'s GCA311,

94-638

Female spade connectors to Mitsubishi style connector. Wire is 16 AWG. Overall length is 7". Used in pump and kit #'s TCA318 and TCA380.

94-639

Walbro GSS pump connector to ring terminals. Wire is 14 AWG. Overall length is 7". Used in pump and kit #'s GCA317, GCA355, GCA3305, GCA3318, GCA3322, GCA3323, GCA3325, GCA3338, GCA3341, GCA3357, GCA3369, GCA3381, GCA3384 and GCA764.

94-646

Walbro GSS pump connector to Mitsubishi style connector. Polarity is reverse of 94-614. Wire is 16 AWG. Used in pump and kit #'s GCA343, GCA3342 and GCA3390.

Accessories

94-647

Female spade terminals to Mitsubishi style connector. Wire is 16 AWG. Overall length is 7". Polarity is reverse of 94-638. Used in pump and kit # TCA376.

94-663

Female spade connector to GM style connector. Wire is 18 AWG. Overall length is 5". Used to adapt pumps with spade terminals to GM brackets.

94-668

Walbro GSS pump connector to GM style connector. Wire is 18 AWG. Overall length is 5". Used to adapt pumps with GSS terminals to GM brackets.

94-686

Universal wire harness with Walbro GSS pump connector on one end. Wire is 14 AWG. Overall length is 42". Use with 187-113 butt connectors.

94-696

Female spade connectors to Walbro GSS pump (male terminals). Used to adapt GSS style bracket to a spade terminal pump.

94-701

Walbro GSS pump connector to Ford style connector. Wire is 16 AWG. Overall length is 5.75". Used in pump and kit #'s GCA3379, GCA709, GCA720, GCA721, GCA739, GCA741, GCA742, GCA743, GCA745, GCA752, GCA763 and GCA767.

Accessories

94-714

Walbro GSS pump with white outlet (reverse polarity) connector to GM style connector. Wire is 18 AWG. Gray positive wire and black negative wire. Overall length is 5". Used to adapt pumps with the GSS terminals to GM brackets.

94-729

Short, universal wire harness for Walbro GSS pump with white outlet (reverse polarity). Gray positive wire and black negative wire. Wire is 18 AWG, 3.25" long. Use with 187-113 butt connectors.

000107694 (NEW)

Universal wire harness to be used with Walbro High Performance F90000267 pump. Wire is 14 AWG. Pink w/black stripe is positive wire, black is negative wire.

187-113

Butt connectors. Use with 94-615, 94-686 & 94-729.

400-690

Minivan wire harness for TU100 applications.

400-920

In-line mounting clamp & sleeve kit.

Accessories

400-929
In-line hardware kit.

0940247
Walbro blade connector style
pump to Ford small electrical
connector harness.

128-3012
Bundy outlet or inlet. 400-929
kit required for each pump.

128-3014
9mm multi-barb outlet or inlet.
400-929 kit required for each
pump.

128-3015
12 mm multi-barb outlet or inlet.
400-929 kit required for each
pump.

128-3023
10 mm threaded outlet or inlet.
400-929 kit required for each
pump.

Accessories

128-3024

8 mm single barb outlet or inlet.
400-929 kit required for each
pump.

128-3025

12 mm outside diameter inlet.
400-929 kit required for each
pump.

128-3026

15 mm outside diameter inlet.
400-929 kit required for each
pump.

128-3027

12 mm banjo outlet or inlet.
400-929 kit required for each
pump.

128-3028

14 mm DIN outlet.
400-929 kit required for each
pump.

128-3039

6-AN outlet or inlet.
400-929 kit required for each
pump.

Accessories

128-3040

8-AN outlet or inlet.
400-929 kit required for each
pump.

128-3041

12 mm female outlet or inlet.
400-929 kit required for each
pump.

128-3042

14 mm banjo outlet or inlet.
400-929 kit required for each
pump.

128-3057

10.5 mm multi-barb outlet or inlet.
400-929 kit required for each
pump.

128-3075

12 mm threaded outlet or inlet.
400-929 kit required for each
pump.

400-1133 (NEW)

For use on GM modules that
have been retro-fitted with
a large electrical connector

TYPICAL INSTALLATION INSTRUCTIONS FOR FUEL PUMP/BRACKET ASSEMBLIES

PRECAUTIONS FOR FUEL SYSTEM SERVICE

TO REDUCE THE RISK OF FIRE AND PERSONAL INJURY IT IS NECESSARY TO OBSERVE THE FOLLOWING PRECAUTIONS:

- Perform this repair **ONLY** in a properly equipped service facility.
- Position the vehicle in a clear, level, well ventilated work area.
- Make sure there are no sources of spark or combustion near the work area.
- Perform work in a no-smoking area, or post no-smoking signs in the area selected.
- Have readily available a fully functional Class B fire extinguisher of adequate size (such as a 5 pound CO-2 as a minimum).
- Disconnect the ground cable from the vehicle's battery before performing any operation involving gasoline, gasoline tanks or gasoline lines.
- Allow the vehicle to cool before performing any operation which could possibly expose gasoline or gasoline vapors to hot parts such as catalytic converters, hot light bulbs, or similar components.

■ Avoid using extension cords or lights which might overheat or cause sparks.

■ Avoid inhaling gasoline fumes and prolonged skin contact with gasoline. Promptly wash any body areas which have been in contact with gasoline.

■ Wear approved safety glasses while performing any repairs.

■ When raising the vehicle to perform under-vehicle services, use proper hoisting or jacking equipment along with approved safety supports.

■ When removing the gasoline from a fuel tank use an OSHA approved pump which is specifically designed for handling gasoline. **DO NOT USE** any other type of pump. Gasoline removed from a fuel tank must be stored in approved gasoline containers.

It is impossible to anticipate all possible risks and conditions under which repairs may be made to a fuel system. Therefore, in addition to the safety concerns listed, you are urged to carefully evaluate the hazards involved in such a service procedure and take whatever further precautions that may be necessary.

FUEL INJECTION IN-TANK FUEL PUMP REPLACEMENT INSTRUCTIONS

WARNING: This rotary fuel injection pump **WILL NOT** work on carbureted fuel systems. It is for electronic fuel injection only.

CAUTION: Read these instructions thoroughly from start to finish before attempting to replace the fuel pump.

MINIMUM TOOL REQUIREMENTS:

- Hoist or end lift jack
- OSHA approved safety stands
- OSHA approved fuel transfer pump
- OSHA approved fuel storage containers
- Variety of mechanics hand tools.

NOTE: The word bracket used throughout these instructions means pump mounting bracket and fuel level sender assembly.

I. Preparations:

A) Relieve fuel system pressure.

- 1) Remove the fuel pump fuse from the fuse block.
- 2) Start the engine and let it run until it consumes any fuel in the lines and runs out of fuel.
- 3) After the engine stops, crank it again for at least 3 seconds to assure relief of remaining pressure. (This procedure is necessary since the fuel system can retain gasoline under pressure for a considerable period of time. Opening a pressurized line could spray fuel creating a risk of fire and/or personal injury.)

B) Remove the ground (–) cable from the battery and position it so that it cannot accidentally make a connection to the battery during the fuel pump replacement procedure.

C) Drain the vehicle fuel tank.

1) First make sure an appropriate fire extinguisher (Class B - flammable liquids designation, as a minimum) is at hand. Then using an OSHA approved gasoline transfer pump, remove as much fuel as possible through the fuel tank filler neck. Store the fuel in approved safety containers only.

2) Lift and safely support the vehicle with approved safety stands with enough height to gain adequate access and clearance to remove the fuel tank.

3) As it may not be possible to remove enough fuel from the tank through the filler neck, more fuel may possibly be drained through bracket connections once the vehicle is raised.

NOTE: Regardless of the method used to drain fuel from the tank, it is important to remove as much fuel as possible from the tank before its removal. This is necessary to prevent fuel spillage from being too full or injury from excessive weight while removing the tank.

II. Tank Removal

WARNING: It is necessary to obtain help in removing and installing the fuel tank due to its size and weight.

NOTE: The following are general tank removal instructions and may not be specific enough for your application. It may be necessary for you to refer to the specific service manual for the vehicle you are working on for specific fuel tank removal instructions.

A) Disconnect the electrical connector at the fuel tank to main harness connector, supporting and partially lowering the tank if required.

B) Disconnect any hoses attached between the fuel tank and the vehicle. Be careful when disconnecting fuel lines to avoid fuel spillage. Note all hose connections to make certain hoses are properly reconnected upon installation.

C) Disconnect and remove fuel filler neck if necessary.

D) Support fuel tank and remove retaining straps to allow tank to be removed from vehicle. Remove the fuel tank being careful to avoid spilling fuel.

E) Note the position and condition of all fuel tank mounting pads and insulators used in isolating the fuel tank from the vehicle body. Mislocated, deteriorated, or incorrect pads and/or isolators can cause objectionable transmission of fuel pump noise into the vehicle.

III. Bracket Removal

A) Thoroughly clean all dirt and debris from the top of the tank. Clean out any dirt from around the locking ring and retainer. This must be done to prevent dirt or foreign material from falling into the fuel tank while removing the bracket.

B) Remove the bracket retainer with proper service tools.

C) Carefully remove the bracket from the fuel tank. Take care not to bend the float arm or scratch the float when it is removed. Discard the fuel tank to bracket o-ring seal.

IV. Remove And Replace Pump

Replace pump and filter using specific instructions provided with each kit.

V. Installation Of Bracket Back Into The Fuel Tank

1) Inspect the inside of the fuel tank for dirt and debris. If excessive, clean out the fuel tank before installing the bracket.

2) Inspect the bracket to see that it is clean and ready for installation.

3) Obtain the new fuel tank seal o-ring from the installation kit and place it in the groove at the fuel tank opening. Place the bracket assembly into the tank using care not to disturb the o-ring seal or to hang the float assembly on any pro-

trusions in the tank. Also use care not to fold or twist the filter as this could cause restricted fuel flow. Install the bracket retainer.

VI. Install Fuel Tank Into Vehicle

1) Inspect the condition and location of all tank mounting pads, insulators, and brackets. Defective, missing, or mislocated pads and insulators will cause the transmission of excessive noise to the vehicle.

2) Inspect and correct any defects in the fuel hoses, filler neck connections or similar components related to the fuel tank installation.

3) Install the fuel tank in the vehicle and tighten the tank support strap bolts. Reconnect all lines and hoses and tighten securely. Connect the electrical connections.

4) Make certain that all hoses, fittings, and electrical connections are correctly and securely attached.

5) Make sure that all fuel lines are correctly routed and secured in any mounting brackets. Make sure that the electrical harness is installed in the original position and all wire clips and mounting devices are present.

VII. Wrap Up

1) Using only equipment designed for use with gasoline, refuel the fuel tank with gasoline. **(NOTE: Be sure to clean up any fuel spills before proceeding)**

2) Inspect the system for fuel leaks and correct them, if required.

3) With the ignition switch off, install the fuel pump fuse and reconnect the ground (-) cable to the battery.

4) Start the engine and inspect fuel lines and connections for leaks. Correct leaks if any exist.

5) Clear any trouble codes in the electronic control system that may exist as a result of the fuel pump replacement procedure. Use the specific vehicle service manual for assistance, if necessary.

TROUBLE SHOOTING

Should the pump fail to operate:

Check the fuel pump fuse and fuel pump relay as outlined in the service manual.

If the pump has power and proper polarity, check the remainder of the fuel system as outlined in the service manual.

NOTE: This pump will not remedy malfunctions of the regulator, injectors or other fuel system components.

PUMP/BRACKET TYPICAL ASSEMBLY

CHRYSLER CORPORATION

PUMP/BRACKET TYPICAL ASSEMBLY

FORD MOTOR COMPANY

PUMP/BRACKET TYPICAL ASSEMBLY

GENERAL MOTORS — LOW PRESSURE

PUMP/BRACKET TYPICAL ASSEMBLY

GENERAL MOTORS — HIGH PRESSURE

TYPICAL TANK UNIT ASSEMBLY

CHRYSLER MOTOR COMPANY

TYPICAL INSTALLATION INSTRUCTIONS

FUEL PUMP REPLACEMENT INSTRUCTIONS

NOTE: The words "tank unit" used throughout these instructions means fuel pump tank unit and fuel level sender assembly.

I PREPARATIONS

- A) Relieve Fuel System Pressure
 - 1) Remove fuel cap from the tank to relieve any tank pressure.
 - 2) Use the following procedure to avoid damage to the injectors or other fuel system components.
- B) Locate and unplug the injector wiring harness, from the injector for single point EFI, or from one of the injectors for multi-point EFI.
- C) Ground one terminal of the injector.
- D) Apply battery voltage from vehicle to the other terminal for 5 seconds to open injector.
- E) Remove the jumper wires and continue on with the fuel system servicing.

II FUEL TANK REMOVAL

PASSENGER CAR VEHICLES

It is not normally necessary to remove the fuel tank in passenger car vehicles. If it becomes necessary, refer to the applicable vehicle service manual for the vehicle you are working on for specific fuel tank removal instructions.

MINI-VANS

WARNING: It is necessary to obtain help in removing and installing the fuel tank due to its size and weight.

NOTE: The following are general fuel tank removal instructions and may not be specific enough for your application. It may be necessary to refer to the applicable vehicle service manual for the vehicle you are working on for specific fuel tank removal instructions.

- A) Safely raise and safely support the vehicle and locate the tank unit in the fuel tank. Supporting and partially lowering the fuel tank if necessary, disconnect the electrical connector at the tank unit.
- B) Clean the area around the fuel lines and top of the tank unit. This is to insure that no contamination enters the fuel lines. The fuel lines will be connected to the tank unit by quick disconnect fittings or by clamps and rubber hoses. In either case, disconnect the fuel lines being careful to avoid spilling fuel.
- C) Disconnect and remove the fuel filler neck if necessary.
- D) If necessary support the fuel tank and remove the retaining straps to allow the tank to be removed from the vehicle. Obtain assistance and remove

- the fuel tank being careful to avoid spillage.
- E) Note the position and condition of all fuel tank mounting pads and insulators used in isolating the fuel tank from the body. Mislocated, deteriorated, or incorrect pads and/or isolators can cause objectionable transmission of fuel pump noise into the vehicle.

III REMOVE AND REPLACE TANK UNIT

- A) Using the special tool available for removing the tank unit retaining ring, remove it by rotating the ring in a counter-clockwise direction. The special tool for this job is best, although other methods can be used. Whatever method is used, do not use any that can cause sparks and a resultant fire or explosion.
- B) Once the retaining ring is removed, remove the tank unit from the tank. Set the tank unit aside.
- C) Examine the inside of the tank for any contamination. If the tank contains any foreign material, it must be cleaned before the new tank unit is installed.
- D) Obtain the new tank unit. Check that the seal is properly positioned under the top of the flange. Also check to insure that the filter locking tabs are engaged with the tank unit. If the tank unit has the fuel level sender/float arm assembly on it, be sure that this operates freely.
- E) Carefully place the tank unit into the fuel tank, ensuring the level sender assembly (if used) does not get bent.
- F) Making sure the seal is properly positioned in the tank groove, install the retaining ring. Turn the ring clockwise to lock in place.

IV FUEL LINE AND ELECTRICAL INSTALLATION

- A) If the tank was removed from the vehicle, check for defective, missing or mislocated mounting pads, insulators, and brackets. Inspect and

correct any defects in the fuel hoses, filler neck connections, or similar components related to the fuel tank installation. Obtain assistance and re-install the tank into the vehicle.

- B) Install the fuel lines onto the tank unit tubes. Make sure the quick disconnect fittings are securely connected, and that the hose clamps used are tight. Connect the electrical harness assembly to the tank unit electrical connector. Reconnect all lines and hoses securely. **Make sure that any fuel tank shields that may have been removed to replace the fuel pump are reinstalled and placed correctly.**

V WRAP UP

- A) Using only equipment designed for use with gasoline, refuel the fuel tank with gasoline. **(NOTE: Be sure to clean up any fuel spills before proceeding.)**
- B) Inspect the system for fuel leaks and correct them, if required.
- C) With the ignition switch off, reconnect the ground (-) cable to the battery.
- D) Start the engine and inspect fuel lines and connections for leaks. Correct leaks if any exist.
- E) Clear any trouble codes in the electronic control system that may exist as a result of the fuel pump replacement procedure. Use the specific vehicle service manual for assistance, if necessary.

TROUBLE SHOOTING

Should the pump fail to operate:

Check the fuel pump fuse and fuel pump relay as outlined in the service manual.

If the pump has power and proper polarity, check the remainder of the fuel system as outlined in the service manual.

NOTE: This pump will not remedy malfunctions of the regulator, injectors or other fuel system components.

TYPICAL TANK UNIT ASSEMBLY

FORD CORPORATION

TYPICAL INSTALLATION INSTRUCTIONS

FUEL PUMP REPLACEMENT INSTRUCTIONS

NOTE: The words "tank unit" used throughout these instructions means fuel pump tank unit and fuel level sender assembly.

I PREPARATIONS

- A) Relieve Fuel System Pressure
 1. Relieve the fuel system pressure by using a pressure gauge tool, Ford service tool number T80L-9974-B or equivalent. Connect the pressure gauge to the Schrader valve located on the engine fuel rail. Slowly open the pressure gauge valve and drain the fuel into a suitable container to relieve the fuel system pressure. **(This procedure is necessary since the fuel system can retain gasoline under pressure for a considerable period of time. Opening a pressurized line could spray fuel creating a risk of fire and/or personal injury.)**
- B) Remove the ground (-) cable from the battery and position it so that it cannot accidentally make a connection to the battery during the fuel pump replacement procedure.
- C) First, make sure an appropriate fire extinguisher is at hand. Then, using an OSHA approved

gasoline transfer pump, drain the fuel tank through the filler neck to remove as much fuel as possible. Store the fuel in approved safety containers only.

II FUEL TANK REMOVAL

NOTE: Some vehicles have two fuel tanks. Be certain of which tank is to be removed before starting this operation.

- A) Safely raise and safely support the vehicle and locate the tank unit in the fuel tank. Supporting and partially lowering the fuel tank if necessary, disconnect the electrical connector at the tank unit to main harness connector.
- B) Prior to removing the retaining clips in the fuel line connectors, note their color and their respective fuel line location. Remove the retaining clips from the fuel line connectors and remove the fuel lines from the tank unit. Check for and remove any other hoses that may be attached to the fuel tank.
- C) Disconnect and remove the fuel filler neck, if necessary.
- D) Support the fuel tank and remove the retaining straps to allow the tank to be removed from the vehicle. Obtain assistance and remove the fuel

tank being careful to avoid spilling fuel.

- E) Note the position and condition of all fuel tank mounting pads and insulators used in isolating the fuel tank from the body. **Mislocated, deteriorated, or incorrect pads and/or isolators can cause objectionable transmission of fuel pump noise into the vehicle.**

III REMOVE TANK UNIT FROM TANK

- A) Once the fuel tank has been removed from the vehicle it is necessary to clean all dirt and debris from the tank unit area. This is necessary to prevent contaminating the fuel tank while removing the tank unit.
- B) Using the appropriate Ford special service tool or equivalent, remove the tank unit retaining ring by rotating it counterclockwise. The special tool for this job is best, although other methods may be used. Whatever method is used, do not use any that can cause sparks and a resultant fire or explosion.
- C) Being careful not to drop any dirt into the fuel tank, bend the float arm or damage the float, remove the tank unit.

IV REMOVE AND REPLACE TANK UNIT

- A) Remove the screws that attach the fuel level sender/float arm assembly to the tank unit. Save the screws to use for re-attaching the level sender assembly to the new tank unit. If necessary, detach the level sender terminal from the flange of the tank unit.
- B) Remove any other screws that might possibly attach the tank unit to the tubing or flange assembly.
- C) **DO NOT CUT THE LEVEL SENDER WIRE.**

Note the colors of the wires and any sleeve that may be over the terminals. Cut the tank unit wires as close to where the wires enter the plastic portion of the tank unit, as possible. Strip 1/4" of insulation from the ends.

- D) Using the tool provided, and referring to the diagrams for various tank units, pry the tubing/flange assembly and the plastic tank unit apart. The tubes should not have any of the retaining clips from the tank unit on them. Discard the old tank unit with filter attached.
- E) Install the new filter provided onto the new tank unit so that the new tank unit looks the same as the old one. It is best to set the filter on a hard surface and press the plastic hub of the tank unit into the filter.
- F) Press the tubing/Flange assembly into the plastic portion of the new tank unit, being careful not to damage the filter.
- G) Maintaining proper polarity, crimp the butt connectors onto the wires, using the recommended tool.
- H) Re-attach level sender assembly to the new tank unit with the screws.

NOTE: The wires will either have black or red insulation or a colored sleeve over the terminal, where connected to underside of flange.

V INSTALLATION OF TANK UNIT INTO FUEL TANK

- A) Thoroughly inspect the inside of the fuel tank for dirt and debris. Make sure that the fuel tank is clean before installing the tank unit. A clean tank will insure long pump service life.
- B) Install the new tank o-ring seal into the groove in the fuel tank opening.
- C) Carefully install the tank unit into the fuel tank.
- D) Install the retaining ring and tighten it by rotating in a clockwise direction.

VI INSTALL FUEL TANK INTO VEHICLE

- A) Inspect the condition and location of all tank mounting pads, insulators, and brackets. Defective, missing, or mislocated pads and insulators will cause the transmission of excessive noise into the vehicle.
- B) Install the fuel line retaining clips, 5/16" (natural/clear) and 3/8" (black), into their respectively sized fuel line connector with the triangular portion of the clip facing away from the fuel line connector opening.
- C) Inspect and correct any defects in the fuel hoses, filler neck connections, or similar components related to the fuel tank installation.
- D) Obtain assistance and install the fuel tank in the vehicle and tighten the tank support strap bolts. Reconnect all lines and hoses and tighten securely. Connect the electrical connections. **Make sure that any fuel tank shields, that may have been removed to replace the fuel pump, are reinstalled and placed correctly.**
- E) Make certain that all hoses, fittings and electrical connections are correctly and securely attached.

VII WRAP UP

- A) Using only equipment designed for use with gasoline, refuel the fuel tank with gasoline. **(NOTE: Be sure to clean up any fuel spills before proceeding.)**
- B) Inspect the system for fuel leaks and correct them, if required.
- C) With the ignition switch off, reconnect the ground (-) cable to the battery.
- D) Start the engine and inspect fuel lines and connections for leaks. Correct leaks if any exist.
- E) Clear any trouble codes in the electronic control system that may exist as a result of the fuel pump replacement procedure. Use the specific vehicle service manual for assistance, if necessary.

TROUBLE SHOOTING

Should the pump fail to operate:

Check the fuel pump fuse and fuel pump relay as outlined in the service manual.

If the pump has power and proper polarity, check the remainder of the fuel system as outlined in the service manual.

NOTE: This pump will not remedy malfunctions of the regulator, injectors or other fuel system components.

WALBRO GEROTOR ELECTRIC FUEL PUMP IN-LINE DESIGN

FEATURES AND BENEFITS

- OE-proven second generation design.
- Models available for most EFI applications including turbo and supercharged.
- Variety of pressures and flows available, including high performance applications.
- Metal inlet and outlet
- 10 mm x 1 mm threaded inlet and outlet accept a variety of fittings.
- Fitting options include banjo, Bundy and hose barsbs.
- Threaded electrical terminal posts.
- Lightweight, compact design.
- QS 9000 certified.

Part #	Description
128-3012	Bundy outlet or inlet
128-3014	9mm multi-barb outlet or inlet
128-3015	12 mm multi-barb outlet or inlet
128-3023	10 mm threaded outlet or inlet
128-3024	8 mm single barb outlet or inlet
128-3025	12 mm outside diameter inlet
128-3026	15 mm outside diameter inlet
128-3027	12 mm banjo outlet or inlet
128-3028	14 mm DIN outlet
128-3039	AN-6 outlet or inlet
128-3040	AN-8 outlet or inlet
128-3041	12 mm female outlet or inlet
128-3042	14 mm banjo outlet or inlet
128-3057	10.5 mm multi-barb outlet or inlet
128-3075	12 mm threaded outlet
400-920	Mounting clamp & sleeve kit
400-929	Hardware kit

FITTINGS

Note: all fittings require copper sealing washer available in kit #400-929.
